

## FIND THE NEXT TERM

**N. J. A. SLOANE**

*Bell Telephone Laboratories*

*Murray Hill, New Jersey*

Here are some interesting puzzles. Find the next two terms in the following sequences, and the rules for generating them. The first few are easy, so try them on yourself, your friends, your parents, and your children. Try the rest on your in-laws and enemies. None require specialized knowledge. Solutions are available on request. These sequences are taken from Reference 1 and were gathered from *Eureka*, the *American Mathematical Monthly*, and other sources.
